ABIODUN MICHAEL

FULL-STACK SOFTWARE ENGINEER

Lagos, Nigeria / Michaelabiodun2006@gmail.com / melifolio.vercel.app / github.com/lordmichaelle1 / linkedin.com/in/shipwithmeli

PROFILE

Full-stack engineer working on production systems: a polytechnic platform with live payments, Django and Laravel backends, and marketplace frontends that vendors run real stores on. I also write benchmark tasks and evaluations for AI coding models. I have been coding since 2021 and taking client work since 2023, across 20+ projects for 10+ clients.

EXPERIENCE

Frontend Engineer Zent Technologies — Apr 2026 – Nov 2026

- Owned the community marketplace and marketing dashboard vendors run real stores on (Next.js, React, RTK Query).
- Proposed and set up the shared frontend package repo: pnpm workspaces, Turborepo and CI publishing to GitHub Packages, so the apps stopped copying code between repos.
- Built the push notification console and migrated it onto a re-architected backend.
- Shipped features from idea to Figma to live in front of vendors within the same week.
- Caught money-display, crash and payment-redirect bugs before they reached users.

Lead Engineer Best Solution Polytechnic & Best Solar Energy — 2024 – Present

- Built one Next.js app serving the public site, student portal, staff admin and API, with 16 typed Payload CMS models.
- Shipped live Paystack payments with webhook reconciliation and per-student data isolation.
- Built bestsolarr.com and a Python/FastAPI LLM customer service bot.

Backend Engineer FHF (Contract) — Sep 2025 – Present

- Own the Django REST Framework backend for a student housing and marketplace platform.
- Closed live production gaps without breaking auth or the live marketplace.

AI Code Evaluator & Task Author Turing, AfterQuery, Snorkel, Mercor, Revelo — 2025 – Present

- Authored Terminal Bench 2 tasks in Harbor format with output-checking tests.
- Reviewed function calling evaluations and built synthetic Python repositories.
- Built Rust fuzzing tasks with cargo-fuzz and AddressSanitizer.

Freelance Developer Self-Employed — 2023 – Present

- Delivered web apps and REST APIs for clients in Laravel, Node.js, Next.js and PostgreSQL.
- Handled auth, role-based access, admin workflows and third-party integrations.
- Built bill payments and a top-up ledger with webhook reconciliation for a fintech.

PROJECTS

Best Solution Polytechnic Platform bestpotech.edu.ng

Public site, student portal and staff admin for a polytechnic. The public site ranks first for the school name.

`Next.js / TypeScript / Payload CMS / PostgreSQL / Paystack`

BestSolar Energy bestsolarr.com

E-commerce for a solar company with several locations: auth, cart, package configurator, customer portal and an AI assistant that gives solar advice.

`Next.js / Supabase / Stripe / AI Agent`

API Grid useapigrid.com

Backend-as-a-service platform with ready-made API endpoints across 15+ categories, including auth, payments, notifications and user management.

`Next.js / Node.js / PostgreSQL / REST API`

shipwithmeli — 2026

Ran a fixed-price service that took non-technical founders' AI-built MVPs from 70% to launched in four weeks.

`Next.js / TypeScript / React / AI`

SKILLS

Frontend	React, Next.js, TypeScript, JavaScript, Tailwind CSS, HTML/CSS
Backend	Node.js, Express, Fastify, Python, Django REST Framework, FastAPI, PHP, Laravel, Rust, Java, Payload CMS
Data	PostgreSQL, MySQL, MongoDB, Supabase, Prisma
AI Evaluation	Terminal Bench 2, Harbor, cargo-fuzz, AddressSanitizer, LLM integration
Tools	Git, Docker, CI/CD, Turborepo, React Native

EDUCATION

B.Sc. Software Engineering Federal University of Technology, Akure — In progress
